SUMMARY

Applied AI engineer with a data-engineering foundation, focused on shipping LLM-powered systems that move real business metrics. At an MSP serving 188 client organizations, I cut technician documentation lookup time by ~70%, lifted AI-agent first-attempt success from 40% to over 90% through a hybrid-retrieval RAG platform and purpose-built MCP integrations, and automated ticket dispatch across 100,000+ tickets in six months. I combine production cloud architecture on Azure with a bias toward measurable, shipped outcomes.

EDUCATION

Florida Atlantic University, Boca Raton, FL. **Jan 2024 – Dec 2025**

Master's in Data Science and Engineering – Data Science and Analytics

Relevant Coursework: Machine Learning, Large Language Models (LLMs), Deep Learning, Natural Language Processing, Data Visualization, Data Mining, Hadoop Ecosystems, Cloud Computing (AWS), Business Analytics, Database Management Systems, Big Data Analytics, Distributed Computing, Reinforcement Learning

PROFESSIONAL EXPERIENCE

BetterWorld Technology (BWT) | Cloud and AI Solutions Engineer ***Oct 2025 – Present***

- Unified Knowledge Platform (RAG): Architected and shipped "BWT Brain," a hybrid-retrieval RAG system consolidating IT documentation across 188 client organizations into a single AI-searchable corpus, cutting average technician lookup time by ~70% and eliminating cross-tool context switching.
- Azure-Native Ingestion Pipeline: Designed and built a Python worker on Azure Container Apps that syncs documentation into Azure AI Search, combining BM25 keyword + vector embeddings + semantic re-ranking for substantially higher answer precision over keyword-only baselines; tuned KEDA autoscaling and per-replica concurrency to absorb bursty sync workloads while keeping idle-state compute cost near zero.
- MCP Server Development: Built three production MCP servers (ConnectWise, IT Glue, Auvik) with authentication and role-based access control, deployed on Azure Container Apps with auto-scaling — turning multi-step manual workflows into single conversational queries and raising agent first-attempt success from ~40% to over 90% on documentation queries.
- Automated Ticket Dispatch: Developed an Azure Functions ticket dispatcher on the ConnectWise Manage API with board-selection and assignment algorithms, processing 100,000+ tickets in six months, and paired it with a metrics dashboard tracking tickets processed, time saved, fairness, and estimated cost savings.
- Operations Analytics Platform: Architected a Cosmos DB and MCP data layer integrating IT Glue, ConnectWise projects, invoices, tickets, technician data, RMM devices, disk metrics, and feedback systems, surfaced through an Azure Container Apps dashboard with time-bounded ticket views, technician performance metrics, account health scores, and MTTR analytics backed by Azure Redis caching; delivered weekly flash and monthly operations reports covering tickets processed and closed, CSAT, MTTR by SLA, and client home-health scores.
- AI-Driven Operations: Used the ConnectWise MCP server to power the Clark Brands 90-day network reliability review, triage NOC alert boards in bulk, and resolve a recurring EventID 528 workflow misfire impacting multiple clients.
- Process Automation: Reduced new-hire onboarding from 2–5 business days to 5–10 minutes using n8n automation for licenses, Microsoft Graph credentials, enterprise apps, and credential delivery; built Power Automate workflows for feedback forms and scheduled tasks; delivered a 7-phase TaxValet onboarding plan projected to eliminate ~75% of manual onboarding effort.
- Agentic Workflow Platform: Building an autonomous IT operations platform combining n8n, Claude, React Flow, and MCP integrations; V1 targets L1 ticket triage automation for measurable ticket deflection.
- AI Strategy & Vendor Evaluation: Authored a leadership strategy brief benchmarking BWT against top-tier MSPs and evaluated vendors including zofiQ (acquired by ConnectWise, Jan 2026), Cooper Copilot, Thread AI, and Rewst, driving vendor selection conversations with the executive team.

Nexturn Pvt.Ltd | ***Associate Data Engineer***

Jun 2022 – Dec 2023

- Data Pipeline Development: Designed, developed, and maintained 15+ automated ETL pipelines using Matillion, Python, and SQL, processing 10GB+ daily data volumes with 99.9% accuracy
- Database Management: Administered PostgreSQL databases, optimized query performance by 40%, and ensured data integrity across multiple business applications
- Business Intelligence: Built 25+ interactive dashboards and reports using Tableau and Power BI, delivering actionable insights to stakeholders and reducing reporting time by 60%
- Data Processing: Implemented big data solutions using Apache Kafka and PySpark to handle large-scale datasets, improving processing efficiency by 35%

- Cloud Solutions: Collaborated with cross-functional teams to deploy AWS-based data solutions, optimizing storage costs by 25% and improving data accessibility
- Data Quality: Established data validation frameworks and monitoring systems, reducing data anomalies by 45% and ensuring compliance with business requirements

SELECTED PROJECTS

ConnectWise SmartOps AI Integration | BetterWorld Technology — *AI-Assisted Service Operations*

- Python service for AI-assisted ticket categorization and prioritization, integrated with Power Automate workflows and Azure AI Foundry note analysis for unresolved tickets.
- Ops dashboard visualizations including Sankey and bar charts by ticket volume, priority, company, and board, with in-dashboard messaging authenticated by user credentials.

Generative AI Solutions & RAG Systems | *Independent Projects*

- Built RAG pipelines and multi-agent orchestration systems using LangGraph, LangChain, and CrewAI, covering retrieval, tool use, and agent hand-off patterns.

Expedia Reconciliation Database System | Nexturn — *Data Engineering & Analytics*

- Data Integration: Extracted and processed financial data from Splunk Data Lake using PySpark, handling 5M+ records daily for payment reconciliation analysis
- Database Administration: Maintained PostgreSQL production database ensuring 99.95% uptime and accurate reconciliation between payment and Financial Data Services (FDS) systems
- Anomaly Detection: Developed automated monitoring systems to identify data discrepancies, reducing manual review time by 70%
- Visualization & Reporting: Created comprehensive Tableau dashboards tracking financial data patterns and failure rates, enabling data-driven decision making for business stakeholders
- Data Recovery: Implemented automated reprocessing workflows for failed records, improving data quality and operational efficiency by 50%

RxSense ETL Pipeline Documentation | Nexturn — *Data Engineering & Process Optimization*

- Worked extensively with Matillion, an ETL tool, to develop and manage data pipelines that integrated Python and SQL scripts.
- Automated data workflows, improving data processing speed and reducing manual intervention for large-scale data transformations
- Documented each pipeline thoroughly, explaining the data flow, transformation steps, and dependencies.
- Streamlined the data transformation process, enabling seamless data integration and enhancing the reliability of the ETL workflows.
- Conducted regular monitoring and troubleshooting of data pipelines, identifying bottlenecks and implementing improvements to enhance efficiency.

TECHNICAL SKILLS

- ***Programming Languages:*** *Python, SQL, R, PySpark*
- ***Machine Learning & AI:*** *TensorFlow, PyTorch, Scikit-learn, Pandas, NumPy, LangChain, LangGraph, CrewAI, RAG, MCP, Claude API, Azure AI Foundry, Agentic Systems*
- ***Big Data & Cloud:*** *Apache Spark, Hadoop, Kafka, AWS (S3, EC2, Lambda, Redshift), Azure (AI Search, Container Apps, Functions, KEDA, Cosmos DB, Redis, AI Foundry), Snowflake*
- ***Databases:*** *PostgreSQL, MySQL, Snowflake, SQL Server, Cosmos DB, NoSQL, MongoDB*
- ***ETL/Data Integration:*** *Matillion, Apache Airflow, Talend, SSIS*
- ***Automation & Platforms:*** *n8n, Power Automate, Microsoft 365, Microsoft Graph, ConnectWise Manage, IT Glue, Auvik*
- ***Visualization Tools:*** *Tableau, Power BI, Matplotlib, Seaborn, Plotly*
- ***Development Tools:*** *Git, Docker, Kubernetes, Jupyter, VS Code*
