# Jaswanth Gaddam

## Cloud and AI Solutions Engineer

Chicago, IL jaswanthnani02@gmail.com +1 (561) 617 4480 linkedin.com/in/gaddamjaswanth github.com/Jaswanthnani02
jaswanthnani02.github.io

Cloud and AI engineer who builds production automation on Azure for IT operations teams: ticket dispatch, MCP tool servers with role-based access, data platforms, and dashboards. Background in data engineering. Open to AI and platform engineering roles; remote, hybrid, on-site, or relocation. Authorized to work in the US on F-1 STEM OPT.

### EXPERIENCE

**Cloud and AI Solutions Engineer** · BetterWorld Technology, Chicago, IL — Oct 2025 – Present

- Built an Azure Functions ticket dispatcher on the ConnectWise PSA API that assigned **100,000+ tickets in six months** with board selection, round-robin, and weighted-load rules; history in Blob Storage for reporting.
- Built a client intelligence platform: **21 scheduled ingestion jobs** join PSA, RMM, documentation, and survey data into Cosmos DB and Azure AI Search; a read-only MCP service exposes **~35 tools** to an LLM, with role and client-scope checks on every call and **~1,200 automated tests**.
- Built MCP tool servers with API-key and SSO auth and RBAC for ConnectWise PSA, IT Glue, Auvik, and related MSP systems; deployed on auto-scaling Azure Container Apps.
- Shipped an operations dashboard (Container Apps, Redis) for ticket volume, technician load, client health, and MTTR; Azure AI Foundry reads ticket notes to explain stalled work; generates weekly and monthly reports.
- Cut new-hire onboarding from **2–5 business days to 5–10 minutes** with an n8n flow on Microsoft Graph (licenses, accounts, apps, manager, calendar, welcome email); built Power Automate feedback and scheduling flows.
- Use Claude Code and Cursor across design, implementation, testing, and deployment; ship through GitHub Actions and Azure DevOps.

**Associate Data Engineer** · Nexturn, India — Jun 2022 – Dec 2023

- Built and operated ETL pipelines with Matillion, Python, and SQL; documented each data flow and dependency.
- Transformed Splunk data-lake extracts with PySpark for payment reconciliation; maintained the PostgreSQL reconciliation database.
- Delivered Tableau and Power BI dashboards for operational and financial reporting.

### SELECTED PROJECTS

**Client intelligence platform — architecture case study.** Five decision records and five production incident reports. github.com/Jaswanthnani02/client-intelligence-platform

**doc-link-check.** Open-source CI tool that finds broken links in Markdown; one file, no dependencies, 38 tests. github.com/Jaswanthnani02/doc-link-check

**mcp-rbac-demo and ticket-dispatcher-demo.** Runnable versions of the MCP authorization and ticket assignment patterns on mock data. github.com/Jaswanthnani02

### SKILLS

| | |
|---|---|
| **Cloud** | Microsoft Azure (Functions, Container Apps, Cosmos DB, Azure Redis, Blob Storage), AWS |
| **Platform and DevOps** | Kubernetes, Azure Kubernetes Service (AKS), Azure Load Balancer, Docker, Azure DevOps, GitHub Actions, Git |
| **AI and automation** | MCP servers, Azure AI Foundry, Azure AI Search, Claude and Claude Code, LangChain, LangGraph, RAG, Cursor, n8n, Power Automate, Microsoft Graph |
| **Data** | Python, SQL, Snowflake and SnowSQL, Databricks, PySpark, PostgreSQL, Kafka, Matillion, Tableau, Power BI |
| **Business systems** | ConnectWise PSA, IT Glue, Auvik, Salesforce CRM |

### EDUCATION

**M.S. Data Science and Engineering**
Florida Atlantic University, Boca Raton, FL — Jan 2024 – May 2025

### CERTIFICATION

**Microsoft Certified: Azure AI Cloud Developer Associate**
Microsoft · ID AF3C690144B4EE0D — Sep 2026
